

“Trailer for TRAIL”

Lightning Talk presented at
ASEE 2012 Annual Conference

Mel DeSart

THE FOLLOWING **PREVIEW** HAS BEEN APPROVED FOR
ALL AUDIENCES
BY THE ENGINEERING LIBRARIES DIVISION OF ASEE

This product has been rated **R** for reports of a technical nature.

Do YOU have thousands, or even hundreds of thousands of technical reports sitting on shelves or in microform cabinets in your library gathering dust?

Do you wish that material was used more frequently than it is now?

Are condition, format and the fact that series containing thousands of reports have NO or only series cataloging all reasons WHY that material doesn't get used?

Do you wish you had some of that shelving and microform cabinet space freed up so you could repurpose it to other uses?

Wouldn't it be great if all of those technical reports had metadata / catalog records, if they were available digitally, and if they were openly accessible to anyone who wanted to see or use them?

The **Technical Report Archive & Image Library (TRAIL)** is an initiative led by the University of Arizona in collaboration with CRL and other interested agencies to identify, digitize, archive, and provide access to federal technical reports issued prior to 1975. The TRAIL project began under the auspices of the [Greater Western Library Alliance®](#).

Technical reports communicate research progress in technology and science; they deliver information for technical development to industry and research institutions contributing to the continued growth of science and technology. These highly detailed reports contain valuable information serving specialized audiences of researchers. While availability to more recent (1994-current) technical report literature has greatly improved with Internet access, legacy technical report documents remain elusive to researchers. Most large research libraries across the country have sizeable collections of federally funded technical research reports—frequently a million or more ranging from several pages to several hundred pages.
