The University of California Shared Print program facilitates the effective development and management of physical collections among the libraries of the University of California. Through coordinated action, the UC Libraries optimize the management of information resources for students and faculty. With a longstanding tradition of collaboration among the libraries and with extramural partners, the UC shared print collections include monographs, journals, microforms and art slides that are jointly collected and collectively managed; most are held as shared collections in storage while others are held in place, in full-service campus libraries.

Program website: http://www.cdlib.org/services/collections/sharedprint/

Shared print collections, strategies and extramural partnership are developed and managed by Shared Print Strategy and Operation Teams. For more information, contact Ivy Anderson, Interim UC Libraries Shared Print Manager: ivy.anderson@ucop.edu.

Update on the Annual Journal Archiving Campaigns to the RLFs (JACS)

The UC Libraries are in the midst of completing archiving work for the third annual journal archiving campaign (JACS3) and planning for the fourth (JACS4), which will begin in summer 2018. JACS build upon the success of the UC JSTOR, WEST, and IEEE shared print journal programs. JACS further accelerate the creation of shared print journal archives among UC Libraries.

JACS are a coordinated effort to rapidly deposit all holdings for a defined title list (approximately 500 titles per year) into the UC Regional Library Facilities, where a single copy is consolidated for long-term retention and access. The campaigns are voluntary. Seven to eight UC campuses participate each year. The title list is selected by bibliographers each year; titles are *in addition* to other WEST title lists.

Participating campuses ship all holdings to the facilities, without reviewing volumes or issues. RLF staff validate holdings at the volume level and deaccession duplicates.

This approach has proven very popular among participating campuses as it greatly alleviates staff time (by about 30%) at contributing libraries in making volume-level decisions. All holdings are shipped to the RLFs where staff remove duplicates, fill gaps and validate holdings. Gaps are filled very rapidly, and campus shelf space is readily reclaimed.

An initial program assessment was conducted in 2016 at the end of JACS1 to inform improvements for JACS2 and beyond. UC will continue to assess and adjust the program over time. Progress thus far:

UC Libraries Instance of AGUA is Launched

As part of the continued development of shared print efforts, the California Digital Library has supported the creation of a separate instance of the AGUA decision support tool to facilitate collections analysis and journal review for the UC Libraries.

With the support of the AGUA tool, the UC Libraries Shared Print program will have a consistent means of selecting titles for JACS and the opportunity to evaluate the distribution and duplication of print journals across the system.

Additionally, UC Library staff can access a UC-specific All Archived Titles report and upload local lists of journals to the On Demand Collection Comparison report for instantaneous comparison with the AGUA archived titles registry.

Disclosure of UC Shared Print Journal Holdings
(JACS, JSTOR, Shared Print for Licensed Content collections)

UC Libraries have developed shared print collections for many years, but the collections have remained fairly hidden. Among them are more than 5,000 titles in the JSTOR, JACS, and Shared Print for Licensed Content journal collections.

Toward the end of 2017, those three collections were disclosed in AGUA and OCLC under the UCL Shared Print program, using current OCLC metadata standards for retention. WEST users of AGUA will now see the UC collections in their collections reports to better inform local and regional decisions.

Now that the initial disclosures are complete, we will continue to grow the collections and begin to work on sharing the disclosure records with other systems including the Journal Retention and Needs Listing (JRNL) and the Print Archives Preservation Registry (PAPR.)

UC Libraries Participate in the HathiTrust Shared Print Monographs Program

Five (5) University of California libraries and the two UC Regional Library Facilities are Phase 1 Participants in the HathiTrust shared print program. In this first phase, UC Libraries have identified 1.7 M monographs for retention in the HathiTrust program. Most are held at the Regional Library Facilities, while approximately 30,000 monographs have been identified for in-place retention at each of three participating campuses.

Consistent with all other extramural partnership in which UC Libraries participate, the UC Libraries will dually contribute its retention commitments to the HathiTrust and UC Shared Print programs. The holdings will be governed by HathiTrust and UC Shared Print policies.

Participation in the HathiTrust program is expected to be a substantial component of UC Libraries' overall Retrospective Shared Print Monographs program.
