

The California Digital Library, the Center for Research Libraries, and HathiTrust are committed to shared print's integration into the scholarly ecosystem by developing shared, interoperable infrastructure. The collaboration creates an opportunity to shift the shared print paradigm from work that is tangential to the traditional collection, to full integration into the lifecycle of collections.

CDL, CRL & HathiTrust Collaboration PAN update June 2021

The Collaboration continues to act on our principles of transparency, inclusion and responsiveness. To this end, we have posted our [2021 strategic plan](#) on our [website](#). Our two objectives this year are increasing community engagement and improving technology solutions supporting shared print.

Engaging the community

The Collaboration continues to liaise with the Rosemont Alliance and The Partnership for Shared Book Collections to share information with their members. In the spirit of transparency, we have posted our [communication plan](#) and welcome [feedback](#) on additional ways to engage the community.

Improving technology solutions

Collections lifecycle and tools that support it

The first step toward improving technology solutions supporting shared print is understanding the full lifecycle of collections through the work done at each stage. The Collaboration drafted a [collections lifecycle model](#), gathered feedback on the model from expert practitioners in a series of [focus groups](#), and held two public webinars, [May 12](#) & [May 18](#), to share what we learned in the focus groups and elicit wider feedback.

To continue to engage with the community, an [editable version of the lifecycle](#) is available for commenting. A quarterly review of comments is planned to incorporate new ideas into the lifecycle document.

Insights gained from the focus groups, webinars and lifecycle comments are forming the foundation for planning a summit to engage library technology and service providers in improving available technology solutions.

Collection comparison tool

In January 2021, the Collaboration released the first free and openly accessible [collection comparison tool](#) that enables libraries to compare their serial holdings to those committed to shared print programs and trusted digital repositories as disclosed in the PAPER database.

We welcome [feedback](#) on the tool, tips for other users and user stories about how the tool is supporting your collection decision making.
